Temeljni literatura in viri / Readings:

Environmental Analytical Chemistry, Ed. F.W. Fifield, P.J. Haines, Blackwell Science, 2000,
Izbrana poglavja/Selected chapters: D. A Skoog, , F. J. Holler, S. R. Crouch, Principles of Instrumental Analysis, Thomson, 2007.

članki v znanstveni in strokovni periodiki s področja analizne kemije,

papers in scientific journals related to analytical chemistry

Cilji in kompetence:

Pridobiti znanja, ki so potrebna za razumevanje analiznih metod in postopkov, ki jih uporabljamo za določevanje organskih in anorganskih onesnažil v okoljskih vzorcih.

Objectives and competences:

To obtain knowledge necessary for the understanding of analytical methods and procedures which are used for the determination of organic and inorganic pollutants in environmental samples.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje:

Poznavanje in razumevanje značilnosti in lastnosti modernih analiznih pristopov za določevanje sledov anorganskih in organskih spojin v okoljskih vzorcih bo omogočilo izbiro ustreznega analiznega pristopa pri reševanje konkretnih analiznih problemov ter kritično oceno in vrednotenje analiznih rezultatov.

Knowledge and understanding:

The knowledge and understanding of characteristics of modern analytical methods for the determination of traces of inorganic and organic pollutants in environmental samples will enable selection or suggestion for the proper analytical approach for the solution of practical analytical problems and critical evaluation of analytical results.

Metode poučevanja in učenja:

Predavanja s seminarjem, priprava seminarske naloge na ostnovi pregleda literature za izbrano tematiko.
Laboratorijske vaje obravnavajo praktični primer analiznega postopka.
Individualni študij s konzultacijami.

Learning and teaching methods:

Lectures with seminar, seminar thesis (selected topic based on the literature survey),
Laboratory exercise deals with an example of practical analytical procedure,
Individual study with consultation

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Vsebina in predstavitev seminarske naloge	30	Content and presentation of the seminar thesis
Ustni izpit	70	Oral exam

----------	-----------------------------

Interakcije rastilna-ekositem-atmosfera

Opredelitev pomembnih aspektov s področij mikrometeorologije, fizike tal, ekologije in biogeokemije uporabljenih v biometeorologiji. Viri podatkov, merjenja in instrumenti v biometeoroloških študijah.

Izmenjava mase in energije v terestričnih ekosistemih. Modeliranje turbulentnih gibanj in difuzije v rastlinski odeji, prenosa gibalne količine in sevanja. Matematični modeli za opis fotosinteze, dihanja, stomatalne regulacije.

Modeli vodnega cikla. Kvantificiranje intercepcije in odtoka padavin. Metode za računanje evapotranspiracije (aerodinamične in statistične). Modeli za trajanje omočenosti lista.

Modeli razvoja in rasti poljščin. Potrebne parametrizacije rastlinske odeje. Preprosti stastični modeli v agrometeorologiji. Dinamični modeli in pogonske spremeljivke v njih. Generični modeli.

Fenološko modeliranje. Stastični modeli v agrofenologiji. Verifikacija modelov in njihova občutljivost. Učinki podnebnih sprememb na fenološke cikle rastlin in živali.

Nehotene spremembe atmosferskega dela okolja – vloga človeka. Onesnaženje zraka, klimatske spremembe, ozonska luknja, odnos globalni-lokalni okoljski problemi. Slabšanje razmer v okolju skupaj z deforestacijo in dezertifikacijo.

Biometeorološki modeli in urbano okolje, Spremembe masnih in energijskih tokov v urbaniziranem prostoru. Klima zaprtih prostorov in povezava s počutjem ter zdravjem človeka. Vpliv klime na prostorsko planiranje in arhitekturo mest.

Plant-Ecosystem-Atmosphere Interactions

relevant aspects of micrometeorology, soil physics, physiological ecology, ecosystem ecology and biogeochemistry. Instrumentation and measurements, associated with the study of plant biometeorology.

Water and energy exchange of ecosystems. Modeling biophysical processes (e.g. turbulence and diffusion, momentum and photon transfer through vegetation, evaporation, photosynthesis, plant and soil respiration, and stomatal mechanics)

Water cycle models. Quantifying Interception of precipitation, outflows on stems and trunks. Methods for evapotranspiration calculation – aero dynamical, radiation, empirical. Modelling leaf wetness duration.

Crop models. Parameterization of plant canopy in models. Simple statistical and dynamical agro meteorological models. Meteorological driving variables and parameters.

Terrestrial phenological modeling. Statistical, causal and dynamical models. Verification, calibration, sensitivity of models. The effects of climate change on plant life cycle events.

The inadvertent modification of the atmosphere by living systems, especially human (studies of pollution, climate change impacts, changes to atmospheric amenity, and the processes of deterioration of landscape including deforestation and desertification)

Biometeorological models of the built environment The intentional modifications of natural energy and matter flows within urban areas, and indoor climate constructions. Modeling indoor climate, urban design, and architecture.

5. Revijalni članki s področja in tekoča periodika.

Cilji in kompetence:

- Pridobitev poglobljenega znanja o vplivu vrena in klime na žive organizme na podlagi fizikalnega pristopa.
- Modeliranje procesov, ki vplivajo na rast in razvoj živilih organizmov in kvantativne metode za oceno vpliva podnebja na agroekosisteme.

Objectives and competences:

- Understanding of weather and climate impact on living organisms and physical factors that influence climate.
- Knowledge of approaches to model processes that influence agroecosystems and methods to quantify vegetation-climate interactions.

Predvideni študijski rezultati:

Znanje in razumevanje
Podrobnejši vpogled v interakcije med atmosferskim delom okolja in živimi organizmi (vegetacija, fauna, človek)
Uporaba: Uporaba fizikalnih zakonov in preprostih modelov za razumevanje biometeoroloških procesov
Refleksija: Povezava interakcije med atmosfero, človeškim delovanjem s fizikalnimi zakoni.

Intended learning outcomes:

Knowledge and understanding:
Deeper understanding of the interactions between atmospheric processes and living organisms (plants, animals, and humans)..
Applicability: The use of basic physical laws and simple models to understand biometeorological processes
Reflection: Interactions between atmosphere and organisms and their description by physical laws.

Metode poučevanja in učenja:

Predavanja, vaje, seminar ob uporabi informacij o stanju klimatskega sistema iz različnih virov

Learning and teaching methods:

Lectures, tutorials, seminars using information on state of the climate from different sources

Načini ocenjevanja:

Opravljeni seminarji iz vaj
predstavitev seminarja, ustni izpit iz teorije.

Delež (v %) /
Weight (in %)

40%

60%

Assessment:

Problem-solving seminars,
Seminar presentation, theoretical examination.

Splošni pogoji za vpis na doktorski študij.	General conditions for enrolment in doctoral studies.
---	---

Vsebina:

Content (Syllabus outline):

Inter- in intraspecifični odnosi v agroekosistemih. Interakcije med rastlinami, njihovimi škodljivci (žuželke, pršice, ogorčice) ali fitopatogenimi organizmi (glice, bakterije, virusi, viroidi, fitoplazme) in koristnimi organizmi v agroekosistemu. Škodljivčeva izbira gostitelja. Vpliv biotičnega stresa na izpad pridelka. Infekcijski procesi pri fitopatogenih organizmih. Vplivanje patogenov na metabolne procese gostiteljskih rastlin. Obrambne reakcije rastlin proti patogenom. Konstitutivna in inducibilna odpornost. Specifičnost odnosov med gostiteljem in parazitom. Poljsko in laboratorijsko določevanje odpornosti škodljivih organizmov. Neciljno delovanje fitofarmacevtskih sredstev in biotičnih agensov. Vmesni posevki, privabilni posevki, prekrivni posevki, antagonistične rastline, antifidanti, naravna fitofarmacevtska sredstva: koncepti in mehanizmi delovanja. Praktična uporaba biopesticidov (glice, bakterije, virusi). Laboratorijsko gojenje škodljivih in koristnih žuželk in drugih živali ter mikroorganizmov. Laboratorijsko in poljsko preizkušanje biopesticidov in biotičnih agensov (plenilske in parazitoidne žuželke, plenilske pršice, entomopatogene ogorčice).

Inter- and intraspecific relationships in agroecosystems. Interactions between plants, their pests (insects, mites, nematodes) or phytopathogenic organisms (fungi, bacteria, viruses, viroids, phytoplasmas) and beneficial organisms in agroecosystems. Host-plant selection by the pest. Influence of biotic stress on the yield loss. Infection processes in phytopathogenic organisms. Influence of pathogens on metabolic processes of the host plants. Plant defence reactions against pathogens. Constitutive and inducible resistance. Specificity of relationships between hosts and their parasites. Field and laboratory evaluation of pest organisms resistance. Non-target effect of pesticides and biological control agents. Intercrops, trap crops, cover crops, antagonistic plants, antifeedants, natural plant protection products: concepts and mechanisms. Practical use of biopesticides (fungi, bacteria, viruses). Laboratory rearing of harmful and beneficial insects and other animals and microorganisms. Laboratory and field evaluation of biopesticides and biological control agents (predatory insects, parasitoids, predatory mites, entomopathogenic nematodes) efficacy.

revijalni članki s področja, tekoča periodika, druga učna gradiva...

Cilji in kompetence:

Objectives and competences:

Temeljni izobraževalni cilj je poglobitev znanja na področju inter- in intraspecifičnih odnosov med živimi organizmi v agroekosistemih ter načinov njihovega podnebnim in geografskih razmeram Slovenije prilagojenega zatiranja, s poudarkom na okolju in človeku sprejemljivejših metodah.

Fundamental objective of the course is deepening the knowledge in the fields of inter- and intraspecific relationships between living organisms in agroecosystems and the knowledge about the methods of their control, which are adapted to Slovenian climate and geographical conditions, with special emphasis on environmentally and human acceptable methods.

Predvideni študijski rezultati:

Znanje in razumevanje:

Predviden študijski rezultat je kandidatovo razumevanje odnosov med živimi organizmi (zlasti na relaciji rastline – škodljivi organizmi – koristni organizmi) v agroekosistemih.

Intended learning outcomes:

Knowledge and understanding:

Intended learning outcome is to qualify the candidate to understand the relationships between living organisms (especially in relation plants – harmful organisms – beneficial organisms) in agroecosystems.

Metode poučevanja in učenja:

Predavanja, seminarji, konzultacije, samostojno delo.

Learning and teaching methods:

Lectures, seminars, consultations, individual work.

Načini ocenjevanja:

Delež (v %) /

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

Detekcijske metode škodljivih organizmov. Diagnostične metode za določevanje vrstne pripadnosti fitopatogenih organizmov: tradicionalne tehnike (simptomatika, morfološko anatomske, selektivni mediji); biokemične tehnike (substratni metabolism, profil maščobnih kislin, analiza proteinov, analiza nukleinskih kislin) tehnike, molekulska detekcija. Praktični prikaz izolacije in determinacije fitopatogenih gliv in virusov (različne tehnike) iz posameznih rastlinskih delov in substratov. Kochovi postulati v fitopatologiji – potrjevanje povzročitelja bolezni. Načini vzorčenja in hranjenja škodljivih organizmov (s poudarkom na žuželkah in ogorčicah) in mikrobov pred determinacijo (maceracija, dehidracija, koncentracija, RNA/DNA ekstrakcija...) in po njej (priprava preparatov...). Uporaba morfoloških determinacijskih ključev izbranih skupin škodljivih žuželk in fitoparazitskih ogorčic: opisni, opisno-slikovni, slikovni morfološki ključi. Telesni deli škodljivih organizmov (glav, oprsje, zadek idr.), pomembni za morfološko determinacijo. Genetski identifikacijski ključi škodljivih organizmov. Pravilna izbira posameznih diagnostičnih tehnik: prednosti in slabosti. Pomen detekcije in determinacije v preprečevanju širjenja karantenskih škodljivih organizmov.

Methods of detecting harmful organisms. Diagnostic methods for determining species affiliation of phytopathogenic organisms: traditional techniques (symptomatic, morphological anatomic, selective media); biochemical techniques (substrate metabolism, profiles of fatty acids, protein analysis, analysis of nucleonic acids) techniques, molecular detection. Practical demonstration of isolation and determination of phytopathogenic fungae and viruses (various techniques) from individual plant parts and substrates. Koch's postulates in phytopathology – confirming the causative agents of illness. Methods of sampling and storing harmful organisms (with a stress on insects and nematodes) and microbes prior to determination (maceration, dehydration, concentration, RNA/DNA extraction etc.) and after (preparing preparation). Using morphological identification keys of selected groups of harmful insects and phytoparasitic nematodes: descriptive, descriptive-pictorial, pictorial morphological keys. Body parts of harmful organisms (heads, chests, abdomen etc.) important for morphological identification. Genetic identification keys of harmful organisms. Correct choice of individual diagnostic techniques: advantages and weaknesses. Importance of detection and determination in preventing the spread of quarantine pests.

Cilji in kompetence:

Objectives and competences:

Temeljni izobraževalni cilj je poglobitev znanja za samostojno delo na področju detekcije in morfološke ter molekulske determinacije izbranih skupin škodljivih žuželk, ogorčic, fitopatogenih gliv, virusov, bakterij in fitoplazem.

The basic educational aim is to deepen knowledge for independent work in the field of detection and morphological and molecular determination of selected groups of harmful insects, nematodes, phylogenetic fungi, viruses, bacteria and phytoplasmas.

Predvideni študijski rezultati:

Predviden študijski rezultat je kandidata usposobiti za detekcijo in determinacijo izbrane skupine ali skupin škodljivih organizmov, z namenom uporabe omenjenih znanj v raziskovalnem ali aplikativnem delu.

Intended learning outcomes:

The intended learning outcome is to train the candidate in the detection and determination of a selected group or groups of harmful organisms, with the intention of using this knowledge in research or applied work.

Metode poučevanja in učenja:

Predavanja, seminarji, konzultacije, samostojno delo.

Learning and teaching methods:

Lectures, seminars, consultations, individual work.

Načini ocenjevanja:

Delež (v %) / Weight (in %)

Assessment:

- pisni izpit
- samostojno delo študenta

70 %
30 %

- written exam
- individual work of the student

Pogoja za opravljanje študijskih obveznosti – pisnega izpita:

Conditions for performing study obligations - written exam:

- zagovor seminarja

- seminar performed

Vsebina:	Content (Syllabus outline):					

Seznanitev s funkcionalno ekologijo kot znanostjo, ki se ukvarja z vlogo organizmov (rastlin) v združbah in ekosistemih. Obravnava različnih funkcionalnih lastnosti oz. znakov rastlin (anatomsko-morfoloških, fizioloških, fenoloških, razmnoževalnih, razširjevalnih, biokemijskih), ki kažejo na prilagoditve rastlinske vrste na določeno okolje. Učinki različnih funkcionalnih skupin rastlin na delovanje ekosistema (produktivnost ekosistema, biogeokemični cikli, biotska pestrost). Korelacije in izključevanja med posameznimi lastnostmi rastlin, kot osnova za funkcionalne klasifikacije rastlinskih vrst. Pregled nekaterih splošnih funkcionalnih klasifikacij rastlin (Raunkiaerjeve življenske oblike, r-K selekcija pri rastlinah, rastlinske strategije po Grime-u). Prilagoditve rastlin na različne oblike motenj in stresa v okolju ter koncept rastlinskih funkcionalnih tipov. Uporaba teh znakov pri sledenju in predvidevanju dinamike vegetacije ob spremembah rabe tal (intenzifikaciji kmetijske pridelave, opuščanju rabe), klimatskih in drugih okoljskih spremembah. Funkcionalna pestrost v naravi, njen evolucijski razvoj in pomen pri stabilnosti ekosistemov. Indikativna vrednost rastlin za potrebe sledenja zračnih, vodnih in talnih onesnaženj. Rastline kot meliorativno sredstvo. Funkcionalne lastnosti invazivnih rastlin

Introduction to functional ecology, dealing with role of plants in ecosystems. Plant functional traits (anatomical, morphological, physiological, phenological, reproductive, biochemical) as indicators of adaptation of plant species to environment. Effects of plant functional types on ecosystem function (productivity, biogeochemical cycles, biotic diversity). Correlations and exclusions among some plant traits as a basis for plant functional classification. Overview of some plant functional classification (Raunkiaer's life forms, r-K selection in plants, Grime CSR strategies). Plant adaptations to disturbances and stress. Application of plant functional traits in monitoring and predicting of vegetation dynamics triggered by land use change (intensification of agricultural production, abandonment of land use), climate and other environmental changes. Functional diversity in nature, its evolution and significance in stability of ecosystems. Indicator value of plants in biomonitoring of environmental pollution, climate change and land use changes. Plants for environmental remediation. Functional traits of invasive plants.

revijalni članki s področja, tekoča periodika, druga učna gradiva...
journal papers, current periodicals, others...

Cilji in kompetence:

Cilji predmeta so študentu približati znanstveno-raziskovalno delo na področju funkcionalnih tipov rastlin ter ekosystemske ekologije ter ga seznaniti z naborom raziskovalnih metod, ki se pri tem delu uporabljajo.

Objectives and competences:

Aims of the class: to make the student familiar with scientific research work in the field of the plant functional types and ecosystem ecology and to introduce available research methods which can be used in this work.

Predvideni študijski rezultati:

Znanje in razumevanje:
Študent pozna nabor najpomembnejših metod, ki se uporabljajo pri preučevanju funkcionalnih tipov rastlin in ekologiji kopenskih ekosistemov, njihov glavni namen ter prednosti in slabosti.
Za določen namen raziskovanja zna izbrati ustrezne metode, jih ovrednotiti s stališča objektivnosti, ponovljivosti in uporabnosti. Zna jih uporabiti v raziskavah odziva rastlin in ekosistemov v eksperimentalnih ali naravnih razmerah. Sposoben je načrtovanja raziskovalnega dela ter sinteze in analize dokaj širokega spektra znanj na področju botanike, rastlinske ekologije in ekosystemske ekologije, varstva okolja ter sorodnih ved.

Intended learning outcomes:

Knowledge and understanding:
The student gets to know basic methods used in study of plant functional types and the ecology of terrestrial ecosystems; their applicability, advantages and disadvantages.
He/she is able to select appropriate methods for a given research problem/question and can critically evaluate their objectivity, repeatability and applicability. He/she is able to apply these methods when studying responses on plant or ecosystem level, both in experimental and environmental conditions. Student can plan research work, he/she is able to make synthesis and analyses of broad spectra of knowledges from the field of botany, plant ecology, ecosystem ecology, environmental conservation and related fields of science.

Metode poučevanja in učenja:

Learning and teaching methods:

<p>Študenti se na predavanjih in laboratorijskih vajah seznanijo z osnovami metod. Te kasneje uporabijo v okviru projektnega dela, ki ga izvedejo na terenu ali v kontroliranih razmerah v laboratoriju oz.rastlinjaku. Rezultate projekta predstavijo.</p>	<p>With lectures and lab exercises students are introduced to basics of different methods. Later they use selected methods in their project work, which can be performed in the field or under controlled conditions (lab, greenhouse). They present the results of the project.</p>

- revijalni članki s področja, tekoča periodika, druga učna gradiva...

Cilji in kompetence:

Tla so osnovni substrat v kmetijstvu in bistven del okolja. Pri raziskavah prehrane rastlin, uvajanju sodobnih agronomskih praks in pri raziskavah varstva in sanacije degradiranih oziroma onesnaženih tal je nujno dobro poznavanje konceptov funkcioniranja in zdravja tal, ki se odraža v kemijskih, biokemijskih, fizikalnih in bioloških lastnostih in procesih v tleh.

Objectives and competences:

Soils are the basic substrate in agriculture and an essential part of the environment. In studying the nutrition of plants, introducing contemporary agronomic practices and in researching the protection and sanitation of degraded or polluted soils it is crucial to be well acquainted with the functioning of the soil, which is to a large extent dependent on the chemical, biochemical, physical and biological properties and processes in the soil.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Predmet omogoča študentom poglobljen vpogled v lastnosti talnih komponent, reakcij, procesov in interakcij, ki usmerjajo delovanje tal kot tridelnega sistema trdne, tekoče in plinaste faze ter kot specifičnega ekosistema. Hkrati jih seznavi z metodami in instrumenti, ki se uporabljajo pri tovrstnih raziskavah.	Knowledge and understanding: The subject enables the student an in-depth insight into the properties of soil components, reactions and processes that direct the functioning of soils as a tripartite system of solid, liquid and gaseous phases and specific ecosystem. At the same time, it acquaints them with methods and instruments used in this kind of research.

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

Elastičnost genetsko pogojenih odzivov rastlin na agrotehnične ukrepe in na druge vplive okolja. Vloga generativnega oziroma vegetativnega razmnoževanja rastlin pri evolucijskih prilagoditvah. Genetski polimorfizem in vpliv genetske strukture sort na biotsko raznovrstnost. Abiotski vplivi, ki so povzročili evolucijske adaptacije rastlin in vplivi naravnih in induciranih sevanj.

Razlike v adaptaciji pri različnih rastlinskih vrstah, ki so povezane s kmetijsko prakso. Obramba in prilagajanje rastlin na abiotske dejavnike, ki pogojujejo sintezo flavonoidov, taninov in drugih snovi, ki ščitijo rastline in njihov pomen v prehrani. Raziskovanje reakcij rastlin na različne tehnologije pridelave kot osnova zagotavljanja kakovosti pridelkov. Alokacija asimilatov kot sestavni del poteka uravnavanja rasti in razvoja kmetijskih rastlin. Pomen interakcije genotipxpatogen v koevoluciji in adaptaciji gojenih in drugih rastlin. Evolucijska adaptacija na opaševalce.

Vloga koevolucije in interakcije pri žlahtnjenju novih sort. Genetska struktura posameznih tipov sort, njihova stabilnost in vzdrževanje genetske identičnosti, principi in metode molekulskeih markerjev kot pomoč pri ciljnem žlahtnjenju novih sort za specifične namene.

The adaptability of genetic responses of plants on the agro technical measures and other environmental conditions. The role of generative or vegetative propagation of plants in the evolutionary adaptations. Genetic polymorphism and the impact of genetic structure of varieties on biodiversity. Abiotic influences that have led to evolutionary adaptations of plants and the effects of natural and induced radiation. Differences in adaptation at different plant species that are connected with agricultural practices.

Defense and adaptation of plants to abiotic factors that determine the synthesis of flavonoids, tannins and other substances that protect plants and their importance in the nutrition.

Study the reactions of plants to different production technology as the base of quality assurance of the products. Allocation of assimilates as part of the growth and development balancing of agricultural plants. The importance of the interaction genotype x pathogen in co-evolution and adaptation of cultivated and other plants. Evolutionary adaptation to pollinators.

The role of co-evolution and interaction in selection of new varieties. Genetic structure of different types of varieties, their stability and the maintenance of genetic identity, principles and methods of molecular markers as an aid in targeted varietal selection of new varieties for specific purposes.

Revijalni članki s področja, tekoča periodika, druga učna gradiva
Magazine articles from the field, current periodicals, other teaching materials

Cilji in kompetence:

Seznaniti študente z interakcijami med genetskimi in ekološkimi dejavniki pri vzgoji novih genotipov s specifičnimi lastnostmi in za specifične rastne razmere (sušni/temperaturni stresi, ...). Naučiti študente prepoznavati in razčlenjevati vplive na rast in razvoj kmetijskih rastlin ter različnih tipov sort. Seznaniti študente z najnovejšo literaturo na tem področju. Posredovati študentom aktualno znanje na področju koevolucije in evolucijskih adaptacij rastlin.

Objectives and competences:

To acquaint students with the interactions between genetic and environmental factors in the education of new genotypes with specific properties and for specific growing conditions (drought / temperature stress ...). To teach students to identify and analyze the impacts on the growth and development of agricultural plants as well as on the different types of varieties. To acquaint students with the recent literature on this subject. To provide students with current knowledge in the field of co-evolution and evolutionary adaptations of plants.

Predvideni študijski rezultati:

Znanje in razumevanje:
Usposobiti študente za prepoznavanje in razčlenjevanje genetskih in ekoloških vplivov na rast in razvoj genotipov ter za samostojno vzgojo novih sort kmetijskih rastlin s specifičnimi lastnostmi v povezavi z molekuskimi analizami.

Intended learning outcomes:

Knowledge and understanding:
Teach students how to recognize and analyze genetic and ecological impacts on the growth and development of genotypes and independent raising of new crop varieties with specific properties in conjunction with molecular analyzes.

Metode poučevanja in učenja:

Študij pri tem predmetu bo organiziran s predavanji, konzultacijami in seminarским delom.

Learning and teaching methods:

Studies in this course will be organized with lectures, consultations, and seminar work.

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Seminarska naloga	30 %	Seminar work
Predstavitev izpit	70 %	Presentation examination

standards-based exercises for college students. American Library Association, Chicago, 139 p.

Revijalni članki s področja, tekoča periodika, druga učna gradiva v e-obliku

Cilji in kompetence:

Predmet je namenjen predvsem študentom, ki na prejšnjih stopnjah niso poslušali informacijskih predmetov ali želijo ta znanja utrditi. Študent spoznava različne informacijske sisteme, načela citiranja, značilnosti znanstvenega jezika in strukturo besedil in s tem pridobi napredna informacijska znanja. Seznani se s terminološkimi orodji (posebno v angleščini), geslovniki in klasifikacijami. Spozna napredne iskalne tehnike ter načine oddaljenega dostopa, vsebinsko specializirane zbirke, zbirke doktorskih del, citatne zbirke ter načela vrednotenja citatov/publikacij. Spozna tehnike za bolj kompetentno odkrivanje vsebin na spletnih iskalnikih. Spozna specifiko slovenskih bibliografij ter načine vrednotenja objav. Seznani se z orodji za računalniško urejanje referenc. Seznani se s stilii in strukturo pisanja na različnih ravneh prispevka in spozna specifične stile za objavljanje.

Objectives and competences:

The course is aimed at students who have previously not attended information-related courses or wish to improve respective competencies. Students get acquainted with different information systems, citation principles, characteristics of scientific language and structure of texts, and thus acquire advanced information knowledge. They get to know terminological tools (esp. English-language-related), specialized glossaries, classification systems. They study advanced search techniques and remote-access procedures, specialized databases, dissertations databases, citation databases, and principles for the evaluation of publications and citation impact. They get conversant with advanced techniques for discovery of scientific information on the Web. They explore specifics of Slovenian national bibliography and systems for research evaluation. They get familiar with citation managers. They study styles and paper composition on different levels and get familiar with publishing guidelines and styles.

Predvideni študijski rezultati:

Znanje in razumevanje:
Študent pridobi znanje za samostojno iskanje in vrednotenje informacij ter oblikovanje znanstvenih izdelkov/člankov. Zna uporabiti strokovno terminologijo in sestaviti ustrezno stavčno strukturo (prevsem v angleščini). Razume iskalno strategijo glede na svoje kriterije: iskanje predmetno-specifičnih vsebin, iskanje organizmov, iskanje/vrednotenje citatov, izbor revije za objavo članka ipd. Vire kritično ovrednoti z rabo analitičnih orodij. Interpretira podatke nacionalne bibliografije Cobiss in sistema Sicris. Usposobi se za pisanje znanstvenega izdelka. Vire uredi v osebno bibliografijo s pomočjo urejevalnikov referenc in po zahtevah mednarodnih založnikov. Citate uporabi pri svojem izdelku, ki

Intended learning outcomes:

Knowledge and understanding:
Students acquire knowledge for efficient and independent retrieval and evaluation of information along with paper writing skills. They can use specialist terminology and compose a correct sentence structure (in English). They understand search strategy, noting particular criteria: subject-specific content, organism-descriptors, citation search/evaluation, selecting a journal for the purposes of publishing, etc. They critically evaluate resources with analytical tools. They appraise data in the Slovenian national bibliography Cobiss and system for research evaluation (Sicris). They gain skills for paper composition. They are able to generate a personal bibliography according to international publishing styles using citation

ga oblikuje v skladu z uveljavljeno strukturo znanstvenih del. Spozna izbrane postopke za spletno oddajo prispevkov (manuscript submission managers).

managers. They employ citations in papers which they systematize according to typical research-paper structure. They gain some knowledge relating to the procedures of manuscript submission managers.

Metode poučevanja in učenja:

Predavanja, računalniške in praktične vaje, praktične naloge, individualne konzultacije, (sodelovanje gostujučih predavateljev po potrebi glede na vsebino), samostojno delo študentov

Learning and teaching methods:

Lectures, practicals in a computer laboratory, coursework assignments, individual consultations, (participation of guest-lecturers if applicable); individual student work

Načini ocenjevanja:

Vsebina:	Content (Syllabus outline):					

Seznanitev s standardi s področja meritev fizikalno-kemijskih in bioloških lastnosti tal in talne vode. Načini in-situ vzorčenja tal in talne vode v različni globinah in glede na namen raziskave. Orodja in problemi povezani z vzorčenjem (reprezentativnost, ponovljivost). Metode osnovne pedološke analize tal: pH tal, tekstura tal, struktura tal, organska snov tal, kationska izmenjalna kapaciteta tal. Fizikalne lastnosti trdne faze (lastnosti primarnih delcev, strukturne značilnosti), tekoča faza (voda, količina vode, energijsko stanje vode) in interakcije. Možne poglobljene vsebine: Dinamika tekočin v poroznem mediju (nasičen in nenesničen tok), evaporacija iz porognega medija, infiltracija, sledila (onesnaževala) v poroznem mediju, prenos osnesnaževal (konvekcijsko disperzijska enačba), gibanje multifazne tekočine, zaslanjevanje tal, topota tal ter metode merjenja erozije. Kemijske meritve: vsebnost mikro in makro hranil ter onesnažil v tleh, sekvenčne ekstrakcije in frakcionacija kovin v tleh, testi mobilnosti onesnažil v tleh (toksično značilno izpiranje), in vitro metode določevanja biološke dostopnosti hranil in onesnažil v tleh (fiziološko pogojeni ekstrakcijski testi, ekstrakcija z ligandi). Biološke in biokemijske metode: metode določevanja mikrobne aktivnosti v tleh (respiracija, dehidrogenazna aktivnost), metode določevanja mikrobne biomase v tleh, ugotavljanje strukture mikrobnih populacij v tleh (fosfolipidi maščobnih kislin, izolacija DNK), specifične encimske aktivnosti v tleh, in vivo metode določevanja biodostopnosti hranil in onesnažil.

Acquaintance with standards in the field of measurement of physical, chemical and biological properties of soil and groundwater. Methods of in situ sampling of soil and groundwater at various depths and in relation to the purpose of the research. Tools and problems connected with sampling (representativeness, repeatability). Methods of basic pedological analysis of soil: pH of soil, soil texture, soil structure. Organic substances of soil, cation exchange capacity of soil. Physical properties of the solid phase (primary particles characteristics, structure), fluid phase (water, water quantity, energy state of water), and interactions there of are addressed. Further insight into the follow topics: fluid dynamics in porous media, evaporation from porous media, infiltration, tracer (pollutants) in porous media, pollutant transfer (convection-dispersion equation), multiphase fluid movement, soil salinization, soil thermal properties and methods of erosion measurement. Chemical measurements: content of micro and macro nutrients and pollution in the soil, sequential extraction and fractionation of metals in soil, tests of mobility of pollutants in soil (toxicologically characteristic leaching), in vitro methods of determining biological availability of nutrients and pollutants in soil (physiologically conditioned extraction tests, extraction with ligands). Biological and biochemical methods: methods of determining microbial activity in soil (respiration, dehydrogenation activity), methods of determining microbial biomass in soil, establishing the structure of microbial populations in soil (phospholipids of fatty acids, DNA isolation), specific enzyme activity in soil, in vivo methods of determining bioavailability of nutrients and pollutants.

Cilji in kompetence:

Kakovost tal je pomemben pogoj za trajnostno (npr. kmetijsko) rabo tal ter pri raziskavah tal kot naravnega vira. Slušatelj spozna metode za določevanja tistih fizikalno-kemijskih in bioloških lastnosti tal ter talne raztopine, ki so pomembni pokazatelji procesov v tleh in funkciranja tal. Slušatelj pridobi praktične izkušnje z merilnimi metodami.

Objectives and competences:

Soil quality is important pre-condition for the sustainable (e.g., agricultural) use of soil as non-renewable natural resource. Students are familiarised with methods of determining physical, chemical and biological properties of soil and soil solution as important indicators of soil processes and functioning of soil. Students acquire practical measurement skills.

Predvideni študijski rezultati:

Znanje in razumevanje:
Slušatelj se nauči izbrati in pravilno uporabiti primerno metodo za merjenje in ugotavljanje lastnosti tal, procesov, funkciranja in indikatorjev kakovosti tal pri raziskavah trajnostne rabe tal v kmetijstvu, oceni tveganja in remediaciji onesnaženih tal, pri ekoloških, eko-toksikoloških in drugih raziskavah talnega ekosistema. Slušatelj se nauči rezultate meritev kritično vrednotiti in jih interpretirati v povezavi z drugimi pridobljenimi in danimi podatki.

Intended learning outcomes:

Knowledge and understanding:
Students are taught to select and use appropriate methods for assessing given soil properties, processes, functions and quality indicators in relation with sustainable soil use in agriculture, risk assessment and remediation of polluted soils, and in ecological, eco-toxicological and other research of soil ecosystems. They are taught to evaluate results critically and interpret results with respect and in connection with other available and obtained data.

Metode poučevanja in učenja:**Learning and teaching methods:**

Predavanja, seminarji, laboratorijske vaje, samostojno delo	Lectures, seminars, laboratory exercises, individual work.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Prerequisites:

splošni pogoji za vpis na doktorski študij	general conditions for enrolment in doctoral studies
--	--

Vsebina: Predmet obravnava najpomembnejše metodološke pristope v proučevanju odziva (1) posameznih rastlinskih osebkov in (2) kopenskih ekosistemov na glavne okoljske, posebej abiotiske dejavnike. Predstavljene metode so ovrednotene s stališča njihove	Content (Syllabus outline): The subject deals with most important methodological approaches used to study the response of 1) individual plants and 2) terrestrial ecosystems to main, mainly abiotic environmental factors. The introduced methods are evaluated with respect to their objectivity,
---	---

objektivnosti, časovne in prostorske reprezentativnosti ter zahtevnosti za izvedbo.

Na ravni rastline so predstavljene metode za spremljanje fiziološkega in biokemijskega odziva rastlin na razpoložljivost svetlobe, vode in hranil, na temperaturni režim, na onesnažila v tleh, zraku in vodi, idr. Predstavljene metode na tem nivoju vrednotijo okoljske dejavnike z meritvami fotosinteze, dihanja rastline, rasti, listne površine, vodnega potenciala, vsebnosti pigmentov, antioksidantov in drugih primarnih in sekundarnih metabolitov.

Na ekosistemski ravni so predstavljene metode, ki obravnavajo tokove snovi in energije skozi kopenske ekosisteme ter dejavnike, ki na to vplivajo. Težišče je na spremeljanju (1) komponent ogljikovega cikla (bruto in neto primarna produkcija in dihanje ekosistema, neto ekosistemsko produkcija, dihanje tal in njegove komponente, dekompozicija), (2) vodne bilance (evaporacija in transpiracija, odtok, intercepcija, razpoložljivost vode v tleh) ter (3) bilance mineralnih hranil (depozicija iz atmosfere, izpiranje, fiksacija N₂, denitrifikacija).

Med bolj detajlno predstavljenimi metodami so: meritve fotosinteze lista z IRGA analizatorji, HPLC in spektrofotometrične analize rastlinskih vzorcev, mikrometeorološke metode (eddy covariance), meritve plinov s premičnimi komorami, stabilni izotopi (ogljik, kisik, vodik, dušik), transpiracijski tok v steblih/deblih, meritve listne površine z LAI analizatorji in fotografijo, vegetacijski indeksi in drugi biometrični postopki.

temporal and spatial representativity and applicability.

On the plant level different physiological and biochemical methods, aimed to study the response to light-, water- and nutrient-availability and to air-, soil- and water pollutants, are presented. These methods reveal the action of environmental factors on the level of photosynthesis, respiration, growth, leaf area, water potential, the content of pigments, antioxidants, and other primary and secondary metabolites.

On the ecosystemic level, methods used in the studies of fluxes of matter and energy in the ecosystems and methods aimed to study the effects of different environmental factors on these fluxes, are presented. Here, the subject focuses on evaluation of 1) different components of the carbon cycle (gross and net primary production, ecosystem respiration, net ecosystem production, soil respiration and its components, decomposition), 2) water balance (evaporation and transpiration, drain off, interception, soil water availability) and 3) the balance of mineral nutrients (atmospheric deposition, leaching N₂ fixation, denitrification).

Methods presented in detail include: gas exchange measurements based on the use of IRGAs, HPLC and spectrophotometric analyses of plant samples; micrometeorological methods (eddy covariance), chamber-techniques used to measure fluxes of gases in the field, stable isotope techniques (carbon, oxygen, hydrogen, nitrogen); sap-flow techniques, leaf area index measurements (ceptometers, hemispheric photography); vegetation indexes and other biometric procedures.

journal papers, current periodicals, others...

Cilji in kompetence:

Cilji predmeta so študentu približati znanstveno-raziskovalno delo na področju ekofiziologije rastlin ter ekosimske ekologije ter ga seznaniti z naborom raziskovalnih metod, ki se pri tem delu uporabljajo.

Objectives and competences:

Aims of the class: to make the student familiar with scientific research work in the field of the ecophysiology of plants and ecosystem ecology and to introduce available research methods which can be used in this work.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študent pozna nabor najpomembnejših metod, ki se uporabljajo v ekofiziologiji in ekologiji kopenskih ekosistemov, njihov glavni namen ter prednosti in slabosti.

Za določen namen raziskovanja zna izbrati ustrezne metode, jih ovrednotiti s stališča objektivnosti, ponovljivosti in uporavnosti. Zna jih uporabiti v raziskavah odziva rastlin in ekosistemov v eksperimentalnih ali naravnih razmerah. Sposoben je načrtovanja raziskovalnega dela ter sinteze in analize dokaj širokega spektra znanj na področju rastlinske ekofiziologije in ekosimske ekologije ter sorodnih ved.

Intended learning outcomes:

Knowledge and understanding:

The student gets to know basic methods used in ecophysiology and the ecology of terrestrial ecosystems; their applicability, advantages and disadvantages.

He/she is able to select appropriate methods for a given research problem/question and can critically evaluate their objectivity, repeatability and applicability. He/she is able to apply these methods when studying responses on plant or ecosystem level, both in experimental and environmental conditions. Student can plan research work, he/she is able to make synthesis and analyses of broad spectra of knowledge from the field of plant ecophysiology, ecosystem ecology and related fields of science.

Metode poučevanja in učenja:

Študenti se na predavanjih in laboratorijskih vajah seznanijo z osnovami metod. Te kasneje uporabijo v okviru projektnega dela, ki ga izvedejo na terenu ali v kontroliranih razmerah v laboratoriju oz. rastlinjaku. Rezultate projekta predstavijo.

Learning and teaching methods:

With lectures and lab exercises students are introduced to basics of different methods. Later they use selected methods in their project work, which can be performed in the field or under controlled conditions (lab, greenhouse). They present the results of the project.

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Izpit	50	Exam
Projektno delo	50	Project work

|--|

Cilji in kompetence:

<p>Študent spozna vlogo mikroorganizmov pri delovanju različnih agroekosistemov. Mikroorganizme zna izkoriščati v proizvodne namene.</p>	<p>Objectives and competences: Student understands the essential role that microorganisms play in functioning of different agroecosystems. Student is able to exploit microorganisms in agricultural production.</p>
--	---

Predvideni študijski rezultati:

<p>Študent razume funkciranje sistema rastlina-mikrob v rizosferi in filosferi. Razume vlogo mikroorganizmov pri biorazgradnji, kroženju snovi in energije v ekosistemu in pomenu le tega za prehrano rastlin. V podrobnostih razume mikorizo in biološko fiksacijo in ju zna izrabiti v praksi.</p>	<p>Intended learning outcomes: Student understands functioning of plant-microbe system in rhizosphere and filosphere. Understands biogeochemical cycling of elements, biodegradation and how this influences plant nutrition. Understands in detail the processes of mycorrhizae and biological nitrogen fixation.</p>
--	---

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja po posameznih sklopih. Problemsko voden seminar prilagojen potrebam posameznega študenta. Seminar lahko študent v dogovoru z nosilcem opravi teoretično ali praktično v laboratoriju.	Lectures and seminar adjusted to student needs. In agreement with the lecture student may decide to do practical or theoretical seminar.
---	--

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Ocenjuje se izvedba problemsko orientiranega seminarja. Ocena seminarja je opisna (opravil/ni opravil).	100	Seminar is evaluated (passed/failed).

Jeziki / Languages:	Predavanja / Lectures: slovenski / angleški Slovene / English
	Vaje / Tutorial: slovenski / angleški Slovene / English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Diplomanti enovitih magistrskih študijskih programov in študijskih programov 2. stopnje s področja biomedicinskih, biotehniških in naravoslovno matematičnih usmeritev.	Prerequisites: Graduates of uniform master programmes and 2 nd cycle programmes of biomedical, biotechnical, mathematical and natural sciences
--	--

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

Fitofarmacevtska sredstva – osnovne definicije. Procesi v usodi fitofarmacevtskih sredstev in dejavniki, ki jo določajo. Porazdelitev v tleh, mehanizmi vezave, fenomen vezanih ostankov, izhlapevanje, zanašanje, površinski odtok, premeščanje v talnem profilu, izpiranje v podtalnico, sprejem v organizme, transformacije - razgradnja – mineralizacija. Remediacija tal: biostimulacija in bioaugumentacija. Vpliv FFS na neciljne organizme. Predstavitev metod preučevanja usode organskih ksenobiotikov v okolju na različnih nivojih in vrednotenja njihovih rezultatov. Uporaba dinamičnega modeliranja in metamodeliranje za ocenjevanje tveganj in upravljanje s FFS v okolju. Karte ranljivosti tal. Omilitveni ukrepi za preprečevanje točkovnega in razpršenega onesnaženja s FFS. FFS na podlagi mikroorganizmov in virusov – prednosti, omejitve in možnosti uporabe v integriranem varstvu rastlin. Zakonodaja, ki obravnava okoljska tveganja FFS v R Sloveniji in EU.

Pesticides - basic definitions. Processes in the fate of plant protection products and the influential factors. Distribution in the soil, binding mechanisms, the phenomenon of bound residues, evaporation, drift, surface runoff, movement in soil profile, leaching into groundwater, uptake by organisms, transformation - degradation - mineralization. Soil remediation: biostimulation and bioaugmentation. The impact of pesticides on non-target organisms. Methods for examining the fate of pesticide in the environment at different levels will be presented, as well as how to interpretate their results. Dynamic modeling and metamodeling approaches for pesticide risk assessment and management in the environment. Maps of soil vulnerability. Mitigation measures for the prevention of point and diffuse pollution by pesticides. Pesticides on the basis of micro-organisms and viruses (biopesticides) - the advantages, limitations and possible applications in integrated plant protection. Legislation dealing with environmental risks of pesticides in Slovenia and EU.

Temeljni literatura in viri / Readings:

- Dunnivant F.M. in Anders E., 2006. A basic introduction to pollutant fate and transfort. An integrated approach with chemistry, modelling, risk assessment and environmental legislation. John Wiley & Sons, Inc. New Jersey, 480 s.
Scheunert I., Parlar H., 1992. Terrestrial Behavior of Pesticides. Springer-Verlag, 144 s.
Roberts T., Hutson D., 1999. Metabolic pathways of agrochemicals (part 1 and 2), The Royal Society of Chemistry, MPG Books Ltd., Cornwall, 1475/ 849 s.
Revijalni članki s področja, tekoča periodika, druga učna gradiva.

Cilji in kompetence:

Posredovati znanja za razumevanje usode fitofarmacevtskih sredstev (FFS) v okolju. Študente seznaniti z različnimi pristopi za ugotavljanje tveganja uporabe FFS in upravljanje s FFS v okolju. Študente spodbujati k samostojnjemu razmišljanju o ukrepih za zmanjševanje okoljskih tveganj uporabe FFS. Specifičnosti FFS na podlagi mikroorganizmov in virusov ter možnosti souporabe s kemičnimi FFS.

Objectives and competences:

Provide knowledge on pesticide fate in the environment. Different approaches to pesticide risk assessment and management in the environment will be introduced. Students will be encouraged to independently reflect mitigation measures for reducing environmental risks of pesticides. Specifics of biopesticides and the possibility of the joint use with chemical pesticides.

Predvideni študijski rezultati:

Znanje in razumevanje:
Kandidat bo sposoben samostojno vrednotiti podatke o lastnostih FFS, ki določajo njihovo usodo v okolju. Sposoben bo izdelati ocene

Intended learning outcomes:

Knowledge and understanding:
Students will be able to independently evaluate pesticide properties data which determine their environmental fate. Moreover, they will be able

tveganj uporabe FFS v različnih kmetijsko-okoljskih scenarijih in predlagati možne ukrepe za zmanjševanje teh tveganj na ravni kmetije, kot tudi vodozbirnih območij in državni ravni.

to make pesticide risk assessments in different agro-environmental scenarios and propose possible measures to mitigate those risks at farm scale, as well as on the catchment and national level.

Metode poučevanja in učenja:

Predmet se izvaja v obliki predavanj, seminarskih vaj (delo z modelji) in samostojne seminarske naloge, kjer pridobljena znanja uporabijo. Uporabljeni bodo sodobna audiovizualna sredstva in računalniška orodja (modeli FOCUS, FOOTPRINT orodja, arcGIS).

Learning and teaching methods:

The course will consist of lectures, tutorials (working with models) and a separate seminar, where acquired knowledge is used. Modern audio-visual products and computer tools will be applied (models FOCUS FOOTPRINT tools, ArcGIS).

Delež (v %) /

Weight (in %)

Assessment:

Načini ocenjevanja:

Seminar.	50%	Seminar.
Ustni izpit.	50%	Oral examination.

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

Klimatski sistem. Opredelitev podnebnih dejavnikov in interakcij med njimi in povratnih zank. Viri paleo klimatskih informacij. Klima različnih geoloških obdobjij. Klimatske značilnosti obdobja meteoroloških merjenj.

Vzroki klimatskih sprememb

(ekstraterestrični in terestrični). Človekov hoten in nehoten vpliv na vremenske spremenljivke, kopno, atmosfero, vreme in podnebje. Tanjšanje ozonskega pliča. Emisije toplogrednih plinov (TGP) in spremembe rabe tal. Ogljikov cikel – viri in ponori CO₂. Vpliv kmetijstva na podnebje.

Podnebno modeliranje. Globalni modeli splošne cirkulacije in metode interpolacije njihovih rezultatov v manjšo prostorsko skalo. Regionalni klimatski modeli. Predpostavke, interdisciplinarni pristopi, koncepti negotovosti. Napoved bodoče klime v različnih časovnih horizontih (100 do 1000 let). Poti do stabilizacije koncentracij TGP.

Posledice klimatskih sprememb. Modeli vplivov na naravne (gozd, kmetijstvo, biotska raznovrstnost) in družbene sisteme. Interakcije z drugimi globalnimi spremembami.

Blaženje podnebnih sprememb. Vzvodi za zmanjševanje emisij TGP. Mednarodna javnost in podnebne spremembe – konvencije, dogovori

Prilaganje na podnebne spremembe. Povezave med blaženjem, prilaganjem in trajnostnim razvojem. Pojem ranljivosti agroekosistemov in prilagoditvene sposobnosti.

Climate system. Climatic factors and interactions. Climate sensitivity and feedback mechanisms. Paleo data and proxies. History and evolution of Earth's climate. Direct Observations of Recent Climate Change. Climate fluctuation and variability.

Drivers of Climate Change (extraterrestrial and terrestrial). Human impact on climate system and climate. Weather modification, greenhouse gas (GHG) emissions, land use change. Ozone layer, ozone hole. Carbon cycle – sources and sinks of CO₂. Agriculture role in climate change.

Climate modeling. Global Climate models in downscaling methods. Regional Climate models and their evaluation. Projections of Future Changes in climate (100 to 1000 years). Stabilisation pathways of GHG concentrations. Uncertainty concepts: quantitative measures and qualitative statements.

Key Vulnerabilities and the Risk from Climate Change. Impacts of climate change on natural (forest, agriculture, biodiversity) and social systems.

Mitigation of climate change. Assessment of mitigation technologies and practices, options, potentials and costs. International responses to climate change.

Adaptation to Climate Risks. Relationships between adaptation and mitigation. Assessment of adaptation practices, options, constraints and capacity. Perspectives on Climate Change and Sustainability

Temeljni literatura in viri / Readings:

10. Revijalni članki s področja in tekoča periodika.

Cilji in kompetence:

Objectives and competences:

- | | |
|--|---|
| <ul style="list-style-type: none"> - Pridobitev poglobljenega znanja o klimatskem sistemu in planetarni klimi na podlagi fizikalnega pristopa. - Modeliranje procesov, ki vplivajo na podnebje in kvantativne metode za oceno vpliva podnebja na vegetacijo. | <ul style="list-style-type: none"> - Understanding of Earth climate system and physical factors that influence climate. - Knowledge of approaches to model processes that influence the Earth climate, and methods to quantify vegetation-climate interactions. |
|--|---|

Predvideni študijski rezultati:

Znanje in razumevanje
Podrobnejši vpogled v fizikalne dejavnike klime, vzroke za klimatske spremembe in njihovo modeliranje. Razumevanje posledic podnebnih sprememb
Uporaba: Uporaba fizikalnih zakonov in preprostih klimatskih modelov za razumevanje klimatskih sprememb.
Refleksija: Povezava interakcije med atmosfero, oceani, površjem, ledom ter človeškim delovanjem s fizikalnimi zakoni.

Intended learning outcomes:

Knowledge and understanding:
Deeper understanding of physical factors that influence the Earth climate, anthropogenic causes of climate change and their descriptions in the models. Understanding climate change consequences.
Applicability: The use of basic physical laws and simple climate models to understand climate change processes
Reflection: Interactions between atmosphere, oceans, land, cryosphere, biosphere and humans and their description by physical laws.

Metode poučevanja in učenja:

Predavanja, vaje, seminar ob uporabi informacij o stanju klimatskega sistema iz različnih virov

Learning and teaching methods:

Lectures, tutorials, seminars using information on state of the climate from different sources

Načini ocenjevanja:

Delež (v %) /
Weight (in %)

Cilji in kompetence:

Cilj predmeta je seznaniti študenta s koncepti, postopki in statističnimi metodami za načrtovanje poskusov in analizo podatkov v bioloških in biotehniških vedah.

Objectives and competences:

Main objective is to give students an overview of concepts and statistical methods for design and analysis of experiments in biological and biotechnical sciences.

Predvideni študijski rezultati:

Znanje in razumevanje: študent nadgradi znanje osnovne statistike z znanjem zahtevnejših statističnih metod in pristopov. Poudarek je na uporabi ustrezne metode, na interpretaciji rezultatov ter na uporabi modernih programskih orodij.

Intended learning outcomes:

Knowledge and understanding: students upgrade basic knowledge of statistics with modern statistical and computing approaches. The focus is on the choice of appropriate methods, on the interpretation of the results and of the use of modern tools for statistical computing.

Metode poučevanja in učenja:

Learning and teaching methods:

Pouk je v računalniški učilnici, pri pouku se uporablja moderna programska oprema. Domače delo.	Lectures in computer room; modern software is used. Home work.
Načini ocenjevanja: Izpit v računalniški učilnici.	Delež (v %) / Weight (in %) Assessment: 100 Exam in computer laboratory.

UČNI NAČRT PREDMETA / COURSE SYLLABUS	
Predmet:	Voda kot naravni vir v kmetijstvu
Course title:	Water as a natural resource for agriculture

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Interdisciplinarni doktorski študijski program BIOZNANOSTI 3. stopnja	Agronomija	1,2	1,2,3,4
Interdisciplinary Doctoral Study Programme in BIOSCIENCES 3rd cycle	Agriculture	1,2	1,2,3,4

Vrsta predmeta / Course type	teoretični predmet / theoretical course
------------------------------	---

Univerzitetna koda predmeta / University course code:	
---	--

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
10	5	/	/	15	95	5

Nosilec predmeta / Lecturer:	Nosilec: prof. dr. Marina Pintar
------------------------------	----------------------------------

Jeziki / Languages:	Predavanja / Lectures:	slovenski / angleški Slovene / English
	Vaje / Tutorial:	slovenski / angleški Slovene / English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Splošni pogoji za vpis na doktorski študij.	Prerequisites: Common conditions for the application on the doctoral study.
--	--

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

Pomen vode kot naravnega vira za kmetijstvo. Zakonski okvir povezave vode in kmetijstva. Voda za hrano in ekosisteme. Omejitve kmetijstva zaradi preveč ali premalo vode. Ugodne vodne talne razmere za rast rastlin. Retenzijske površine in kmetijstvo. Osuševanje in namakanje. Odvisnost svetovnega in slovenskega kmetijstva od namakanja. Različne tehnologije namakanja in njihov vpliv na okolje. Namakanje nekmetijskih površin. Sistemi za podporo odločanja o namakanju. Kakovost vode za rabo v kmetijstvu. Vodni viri za namakanje (površinske vode, podzemne vode, voda iz čistilnih naprav). Nabira vode. Problematika vodnih zadrževalnikov. Ukrepi za zmanjšano porabo vode v rastlinski pridelavi. Vpliv kmetijstva na vodno okolje. Mehanizmi prenosa onesnažil v površinske in podzemne vode. Mehanizmi preprečevanja vnosa onesnažil v vodno okolje in mehanizmi čiščenja voda onesnažil iz kmetijstva. Računalniško modeli prenosa onesnažil v vodno okolje. Vodovarstvena območja in kmetijstvo. Celovito urejanje voda v kmetijskem okolju.

Water as a natural resource important for agriculture. Legislative framework of water and agriculture connection. Water for food and ecosystems. Water as a restriction factor for agriculture – too much or to less water. Appropriate soil water status for plant production. Water retention areas and agriculture. Drainage and irrigation. Dependency of world and Slovene plant production on irrigation. Irrigation of non agricultural land. Different irrigation technologies and their impact on the environment. Decision support systems for irrigation. Water quality for the use in agriculture. Water resources for irrigation (surface waters, groundwater, and treated waste water) Water harvesting. Water reservoirs. Measurements for water use reduction in plant production. Mechanisms of pollutants transfer to surface and ground waters. Mechanisms of pollution prevention and mechanisms of agriculture pollutants reduction. Computer models dealing with agriculture and water quality. Water protection zones and agriculture. Holistic approach to water management in agricultural environment.

Temeljni literatura in viri / Readings:

- Lazarova, V., Bahri A. 2005. Water Reuse for Irrigation. CRC Press, Boca Raton. 408 s.; ISBN 1-56670-649-1. Chapter 1-9.
- Molden D., 2007. Water for Food, Water for Life. Earthscan, London. 645 s., ISBN: 978-1-84407-396-2. Chapter 3 in 4.:
- Revijalni članki s področja, tekoča periodika, druga učna gradiva, ipd.

Cilji in kompetence:

Spozнати пomen vode v in za kmetijstvo ter vpliv kmetijstva na kakovost in količine vode z vsemi pomembnimi procesi in potmi prenosa onesnažil iz kmetijstva v vodno okolje.

Objectives and competences:

To realize a meaning of water in and for agriculture and the impact of agriculture to water quality and quantity inclusively all important processes and paths of pollutant transport from agriculture to water media.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: študent pridobi znanje o vodi kot o naravnem viru, pomembnem za kmetijstvo, na katerega kakovostno in količinsko stanje pa kmetijstvo posredno ali neposredno s svojimi dejavnostmi vpliva. Spozna, kakšni so možni ukrepi za čim manjši vpliv kmetijstva na vodno okolje in za trajnostno upravljanje z vodo v kmetijstvu.	Knowledge and understanding: students get knowledge about water as a natural resource important for agriculture. Agriculture activities impact water quality and quantity status. Students get knowledge on measurements to diminish the negative impact of agriculture to water environment and for sustainable management of water in agriculture.
---	---

Metode poučevanja in učenja:

Predavanja oz. konzultacije in projektno oz. seminarsko delo.

Learning and teaching methods:

Lectures or consultation and project work or seminars.

Načini ocenjevanja:

Delež (v %) /
Weight (in %)

Assessment:

Ocena seminarja (če je mogoče v povezavi s študentovo doktorsko nalogo).	100	Evaluation of the seminar (if possible connected with the doctoral work)
