

UČNI NAČRT PREDMETA / COURSE SYLLABUS	
Predmet: Course title:	Antioksidanti Antioxidants

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Interdisciplinarni doktorski študijski program BIOZNANOSTI 3. stopnja	Živilstvo	1,2	1,2,3,4
Interdisciplinary Doctoral Study Programme in BIOSCIENCES 3rd cycle	Food Science	1,2	1,2,3,4

Vrsta predmeta / Course type	individualno raziskovalni predmet / individual research course
------------------------------	--

Univerzitetna koda predmeta / University course code:	
---	--

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
/	15	5	/	5	100	5

Nosilec predmeta / Lecturer:	Nosilec: Prof.dr. Helena Abramovič
------------------------------	------------------------------------

Jeziki / Languages:	Predavanja / Lectures: slovenski / angleški <u>Slovene / English</u>
	Vaje / Tutorial: slovenski / angleški <u>Slovene / English</u>

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Splošni pogoji za vpis na doktorski študij	Prerequisites: General conditions for enrolment in doctoral studies
---	--

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

Dodatek snovi z antioksidativno učinkovitostjo v živilski izdelek prispeva h kakovosti in varnosti hrane, saj podaljša obstojnost ter zviša biološko vrednost živila. Antioksidanti so strukturno raznolike spojine. V okviru izbirnega predmeta bomo opisali posamezne skupine antioksidantov, ki so v živilu naravno prisotni ali dodani. Opisali bomo različne reakcijske mehanizme (reduksijska sposobnost, učinkovitost lovljenja prostih radikalov, sposobnost keliranja kovin) delovanja antioksidantov. Pokazali bomo, da je antioksidativna učinkovitost spojine posledica ustreznih fizikalno-kemijskih lastnosti in kemijske strukture. Seznanili se bomo z različnimi metodološkimi pristopi določitve antioksidativne učinkovitosti. Živila so po svoji sestavi heterogeni sistemi. Zato vsebina predmeta vključuje primerjavo in interpretacijo delovanja antioksidantov v različnih sistemih ter razlago, kako strukturne lastnosti in specifična porazdelitev omenjenih spojin odloča o njihovi antioksidativni učinkovitosti. Ozaveščenost potrošnikov glede škodljivih vplivov sintetičnih aditivov vzpodbuja uporabo naravnih dodatkov. Zato se bomo seznanili z novejšimi metodološkimi pristopi pridobivanja in karakterizacije izvlečkov spojin z antioksidativno učinkovitostjo iz različnih naravnih virov.

The substances with antioxidative effectiveness added to food product contribute to its quality and safety, since it prolongs shelf-life and raises the biological value of the food. Antioxidants are structurally different compounds. In the frame of the elective subject the groups of antioxidants (naturally present in food or added) will be described. Various reaction mechanisms (reducing capacity, effectiveness in scavenging free radicals, ability to chelate metals) of antioxidant's action will be described. It will be demonstrated that the antioxidative effectiveness of a compound is a consequence of corresponding physico-chemical properties and chemical structure. The students will be acquainted with various methodological approaches of antioxidative effectiveness determination. Foods are heterogeneous systems in their composition. Therefore the comparison and interpretation of the activity of antioxidants in various systems will be provided; we will show and explain how structural properties and partition of these compounds determine their antioxidative effectiveness. Consumer awareness of the harmful effects of synthetic additives promotes the use of natural additives. Therefore, the novel methodological approaches of obtaining and characterization of extracts of compounds with antioxidant efficiency from various natural resources will be provided.

Temeljni literatura in viri / Readings:

Zapišejo se samo glavni učbeniki, nato se lahko zapiše še besedilo: »revijalni članki s področja, tekoča periodika, druga učna gradiva...«

Temeljni literatura in viri:

Glavni učbeniki:

Cilji in kompetence:

Izobraževalni cilji: Cilj predmeta je posredovati znanja povezana s problematiko antioksidantov in osvojiti ustrezno metodologijo določitve antioksidativne učinkovitosti.

Kompetence: Sistematična obravnava in razumevanje različnih dejavnikov, ki so povezani z antioksidanti je potrebna zato, da bi lahko predvideli in nadzorovali kakovost in varnost živilskega izdelka.

Objectives and competences:

Educational aims: The aim of the subject is to provide the knowledge associated with antioxidants and to get familiar with appropriate methodology of antioxidative effectiveness determination.

Competences: Systematic treatment and understanding of the various factors connected with antioxidants is necessary for anticipating and controlling the quality and safety of food

	products.
--	-----------

Predvideni študijski rezultati:

Poznavanje in razumevanje mehanizmov antioksidativnega učinkovanja.
Napovedovanje kakovosti, učinkovitosti, uporavnosti in ustreznosti posameznih antioksidantov v danih matriksih živila. Sposobnost interpretacije raziskovalnih rezultatov.

Intended learning outcomes:

Knowledge and understanding the mechanisms of antioxidant action.
Capacity to predict the quality, effectiveness, usefulness and suitability of individual antioxidants in given food matrices.
Capacity to interpret research results.

Metode poučevanja in učenja:

Seminar, vaje, konzultacije.

Learning and teaching methods:

Seminar, tutorial, consultation.

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Priprava seminarške naloge	70	Preparation of seminar
Predstavitev seminarške naloge	30	Presentation of seminar
